

Computer Operating Environment

The PRO-T-S Dialer system is designed to run on standard PC based server hardware running either the Microsoft Windows 2003 or 2008 server operating system. The CPU and hard disk requirements are strictly dependent on the configuration being deployed, however, a typical small server set up to run the PRO-T-S software is:

- Dual core processor running at 2 GHz or better
- 2 GB of RAM
- A RAID 1 disk array with two(2) 30 GB (or larger) HD (for OS, application software, and logging)
- A RAID 1 disk array with two(2) 70 GB (or larger) HD (for recordings)
- 1 GB Network interface card
